AsciiDoc & doc-as-code Best Practices

Version 1.18-SNAPSHOT

2018-12-18

Table of Contents

1. Demo	2
2. Editor	2
2.1. Graphviz	3
3. Inline icons	3
4. Custom code highlighter	3
5. init and closure	4
6. Generation using Maven	4
7. .doc to .adoc	7
8. Publish HTML & PDF to github	8
8.1. Initialize Github space	8
8.2. Configure Maven plugin	9
9. Use in pipelines	9
10. Confluence to AsciiDoc	9
11. Reveal.js	10
11.1. Examples	10
11.2. Fullscreen on smartphone	10
11.3. Generation	10
11.4. Inline options	10
12. Appendix	12
12.1. Revision marks	12

Table 1. History

Date	Author	Detail
2018-12-18	bcouetil	Moved Gerrit plugin configuration from Jenkins to Gerrit page + Enhanced HTML CSS + Cropped some images + Improved PlantUML skin
2018-12-11	bcouetil	- Added reveal plugins and background - Fixed reveal css following change in structure in asciidoc-reveal master (from previous version : 1.1.3) - Implemented Zenika layout in HTML and PDF - Reported back reveal-js enhancements
2018-11-28	bcouetil	- Updated reveal css for all syntax elements, for both light and dark themes : asciidoc-syntax-quick-reference is now nicely output - Refactored light and dark css, extracting common items into reveal-zenika.css - Added syntax quick reference in all format generated and linked in asciidoc page
2018-11-13	bcouetil	- Updated sample project with Reveal.js generation - Duplicated Reveal.js execution to have multiple styles - Compromised layout between 4/3 and 16/9 - Minor changes in Reveal.js css - Added some web comics
2018-11-02	bcouetil	- reorganized asciidoc best practices - added some Geek & Poke images - reveal.js themes Zenika dark + light + parallax - updated asciidoc/reveal versions in pom.xml
2018-09-19	bcouetil	- Sample asciidoctor maven project published on Github - Github & LinkedIn links - Sample project tree - new images + resizing and positioning
2018-08-29	bcouetil	Asciidoc HTML look & feel changes
2018-08-24	bcouetil	Icones added for download + favicon added for webpage
2018-08-23	bcouetil	Initial commit

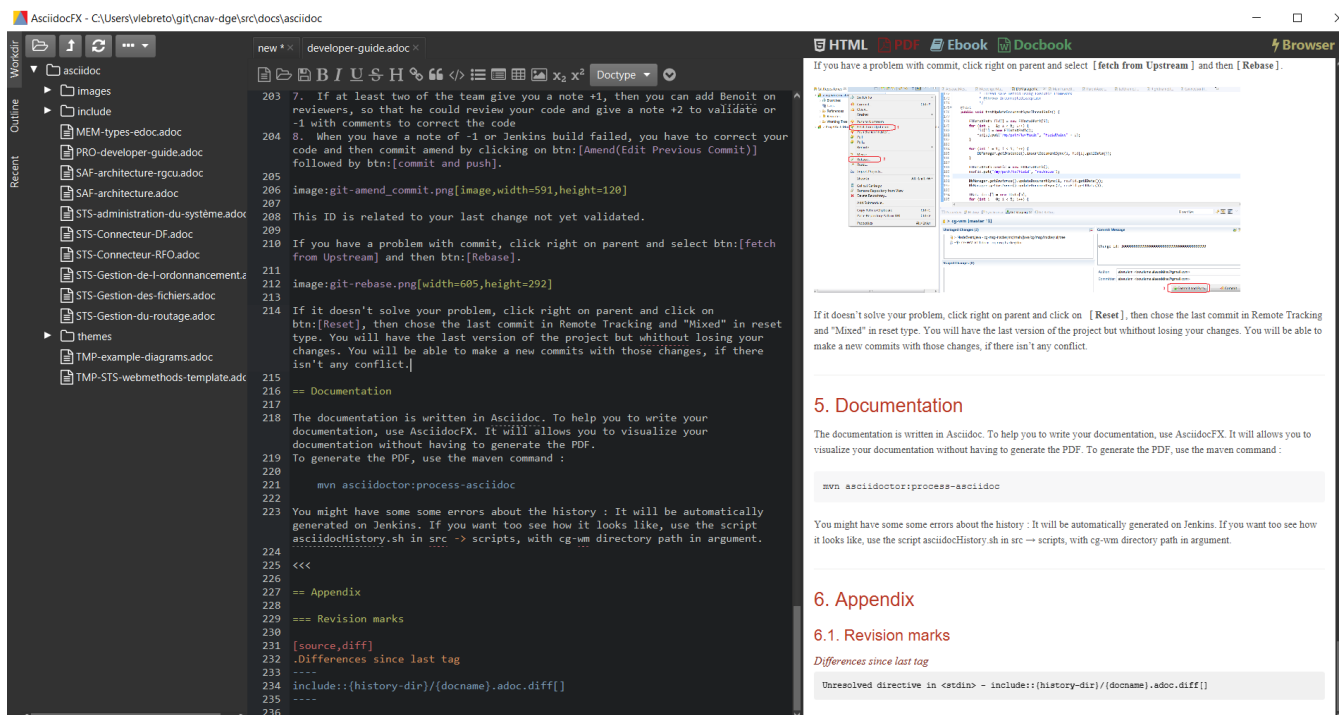

THE HISTORY OF... GETTING CODERS TO DOCUMENT

1. Demo

2. Editor

To help you to write your documentation, use AsciiDocFX. It will allows you to visualize your documentation without having to generate the PDF. You can consider Visual Studio Code too, it has a nice plugin but with less features.

Download and install :

- AsciiDocFX, to create and edit your documents
- Graphviz, to add the extension for your AsciiDocFX installation

Rules to produce AsciiDoc files :

- File names are in kebab-case, except the type at the beginning
- Use `kbd:[myShortcut]` for keyboard shortcuts

- Use `\btn[myButton]` for buttons
- High level title should be on new pages (use <<<)

Diagrams are generated using PlantUML. [Here](#) are some examples with Zenika's style.

To show a in progress diagram to colleagues, you can generate a web link using [PlantUml generator](#). There is also [PlantText](#).

2.1. Graphviz

Graphviz has to be installed to use PlantUML diagrams.

On Windows

- Download and install : <http://www.graphviz.org/download/>
- add bin directory to windows path
 - C:\Program Files (x86)\Graphviz\bin

3. Inline icons

- See <https://asciidoctor.org/docs/user-manual/#icons>
- Font Awesome 4.6.3 Class Explorer : <https://lab.artlung.com/font-awesome-sample/>
 - no need for `:icons: font` to use font awesome-font for icons

4. Custom code highlighter

- To use a custom code highlighter, see the maven configuration in next paragraphs
- Default highlight.js processor is too basic, instructions [here](#) to change
- [Highlight.js demo](#) with all languages and all styles

5. init and closure

Here are the sources of [init.adoc](#) and [closure.adoc](#) included in various sources in this documentation.

They are here for generic configuration and data accross files.

6. Generation using Maven

You will find a sample Maven project generating both PDF and HTML, with current doc's layout, on [my Github](#).

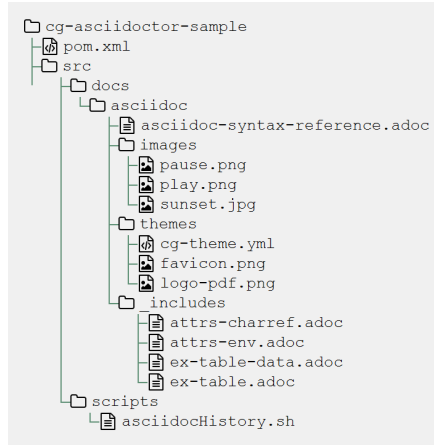

Figure 1. File system tree

AsciiDoctor maven plugin configuration

```

<!-- to generate asciidoc PDF + HTML documents -->
<!-- single usage : mvn generate-resources -Dadoc.skip=false [- -non-recursive] -->
<plugin>
  <groupId>org.asciidoctor</groupId>
  <artifactId>asciidoctor-maven-plugin</artifactId>
  <!-- to increment versions, see pom.xml examples on AsciiDoctor Github -->
  <!-- 1.5.7 and 1.5.7.1 show too many warnings on PDF -->
  <version>1.5.6</version>
  <!-- if we don't want to execute in modules (this would work though) -->
  <inherited>false</inherited>
  <dependencies>
    <dependency>
      <groupId>org.asciidoctor</groupId>
      <artifactId>asciidoctorj-pdf</artifactId>
      <version>1.5.0-alpha.16</version>
    </dependency>
    <dependency>
      <groupId>org.asciidoctor</groupId>
      <artifactId>asciidoctorj-diagram</artifactId>
      <version>1.5.9</version>
    </dependency>
    <!-- comment to use the default version -->
    <dependency>
      <groupId>org.jruby</groupId>
      <artifactId>jruby-complete</artifactId>
      <version>9.1.17.0</version>
    </dependency>
    <!-- comment to use the default version -->
    <!-- <dependency>
      <groupId>org.asciidoctor</groupId>
      <artifactId>asciidoctorj</artifactId>
      <version>1.5.7</version>
    </dependency> -->
  </dependencies>
  <configuration>
    <skip>adoc.skip</skip>
    <sourceDirectory>src/docs/asciidoc</sourceDirectory>
    <requires>
      <require>asciidoctor-diagram</require>
    </requires>
    <attributes>
      <!-- for Font Awesome icons -->
      <icons>font</icons>
      <idseparator>-</idseparator>
      <idprefix />
      <!-- custom -->
      <source-dir>../../main/java</source-dir>
      <test-dir>../../test/java</test-dir>
      <project-version>${project.version}</project-version>
    </attributes>
  </configuration>
</plugin>

        <!-- dynamic : PRES-asciidoc.html?transition=convex -->
        <revealjs_transition>slide</revealjs_transition>
        <revealjs_slideNumber>true</revealjs_slideNumber>
        <!-- does not work T_T only solution is put a favicon.ico in the root folder of the website -->
        <!-- <favicon>themes/favicon.png</favicon> -->
        <revealjs_width>1100</revealjs_width>
        <revealjs_height>700</revealjs_height>
        <revealjs_plugins>revealjs-plugins/revealjs-plugins.js</revealjs_plugins>
        <revealjs_plugins_configuration>revealjs-plugins/revealjs-plugins-
conf.js</revealjs_plugins_configuration>
      </attributes>
    </configuration>
  </execution>
</executions>

```

```

</execution>
<execution>
  <id>asciidoc-to-pdf</id>
  <phase>generate-resources</phase>
  <goals>
    <goal>process-asciidoc</goal>
  </goals>
  <configuration>
    <backend>pdf</backend>
    <sourceHighlighter>rouge</sourceHighlighter>
    <attributes>
      <imagesdir>${project.build.directory}/generated-docs/images</imagesdir>
      <toc />
      <toclevels>3</toclevels>
      <pagenums />
      <pdf-style>${user.dir}/src/docs/asciidoc/themes/pdf-theme.yml</pdf-style>
      <pdf-fontsdir>${user.dir}/src/docs/asciidoc/themes/fonts/pdf</pdf-fontsdir>
    </attributes>
  </configuration>
</execution>
</executions>
</plugin>

```

To generate the PDF locally, use the maven command :

```
mvn generate-resources --non-recursive
```

7. .doc to .adoc

If the initial documentation is of Microsoft Word, you have to first migrate it to AsciiDoc file.

Download and install pandoc.

To migrate a document, use it in command line

```
pandoc --from=docx --to=asciidoc --wrap=none --atx-headers --normalize --extract-media=images monDoc.docx > monDoc.adoc
```

HOW TO ENSURE QUALITY

8. Publish HTML & PDF to github

8.1. Initialize Github space

```
mkdir docs
cd docs
git init
git checkout --orphan gh-pages
```

Copy a first version of the site in the directory, then :

```
git add *
git commit -m "initial site content"
git remote add origin "https://github.com/NeVraX182/docs.git"
git push --set-upstream origin gh-pages
```

8.2. Configure Maven plugin

Maven SCM plugin configuration

```
<plugin>
  <groupId>org.apache.maven.plugins</groupId>
  <artifactId>maven-scm-publish-plugin</artifactId>
  <version>3.0.0</version>
  <inherited>>false</inherited>
  <configuration>
    <scmBranch>gh-pages</scmBranch>
    <!-- token generated from github > settings > Developer settings > Personal access tokens > public_repo -->
    <pubScmUrl>scm:git:https://USER:TOKEN@github.com/USER/docs.git</pubScmUrl>
    <content>target/generated-docs</content>
  </configuration>
</plugin>
```

9. Use in pipelines

To use in Jenkins Pipelines, see [Jenkins Best Practices](#)

To use in Gitlab Pipelines, see [Gitlab Best Practices](#)

10. Confluence to Asciidoc

From [link::https://confluence.atlassian.com/doc/export-content-to-word-pdf-html-and-xml-139475.html](https://confluence.atlassian.com/doc/export-content-to-word-pdf-html-and-xml-139475.html)[Confluence HTML export] and

- Go to the space and choose [**Space tools**] → [**Content Tools**] from the bottom of the sidebar

- Choose [**Export**] (you may need to zoom out to see it)
- Choose [**HTML**]
- Click [**Unselect All**] and choose specific pages
- Click [**Export**]

TODO: https://github.com/asciidoctor/asciidoctor.org/blob/master/docs/_includes/convert-from-confluence-xhtml.adoc

11. Reveal.js

See [official documentation](#) on AsciiDoctor website.

11.1. Examples

Official examples [here](#), especially [the G2 Scoring one](#).

Personnal examples : see at the end of the homepage.

11.2. Fullscreen on smartphone

On Android, common browsers have adress bar preventing reveal.js sites to go fullscreen. To get a real fullscreen, install **Full Screen Browser**.

11.3. Generation

Maven plugin showed above include a reveal.js generation.

11.4. Inline options

Some options can be added in HTTP address :

- [PRES-asciidoc.html?transition=convex](#)
- [PRES-asciidoc-light.html?slideNumber=false](#)
- <https://revealjs.com/?parallaxBackgroundImage=https%3A%2F%2Fs3.amazonaws.com%2Fhakim-static%2Freveal-js%2Freveal-parallax-1.jpg¶llaxBackgroundSize=2100px%20900px>

geek & poke
