| 3.5. Pipeline creation . . . . .                     | 6 |
| 4. Troubleshooting . . . . .                         | 8 |
| 4.1. I accidentally . . . . .                        | 8 |
| 5. Appendix . . . . .                                | 9 |
| 5.1. Revision marks . . . . .                        | 9 |

Table 1. History

| Date       | Author   | Detail   |
|------------|----------|--|
| 2018-11-28 | bcouetil | - Updated reveal css for all syntax elements, for both light and dark themes : asciidoc-syntax-quick-reference is now nicely output - Refactored light and dark css, extracting common items into reveal-zenika.css - Added syntax quick reference in all format generated and linked in asciidoc page |
| 2018-11-02 | bcouetil | - reorganized asciidoc best practices - added some Geek & Poke images - reveal.js themes Zenika dark + light + parallax - updated asciidoc/reveal versions in pom.xml  |
| 2018-09-19 | bcouetil | - Sample asciidoctor maven project published on Github - Github & LinkedIn links - Sample project tree - new images + resizing and positioning   |
| 2018-09-05 | bcouetil | Minor changes  |
| 2018-08-29 | bcouetil | Asciidoc HTML look & feel changes  |
| 2018-08-24 | bcouetil | Reworked asciidoc index.html   |
| 2018-08-24 | bcouetil | Icones added for download + favicon added for webpage  |
| 2018-08-23 | bcouetil | Initial commit   |

## OLD ADAGES EXPLAINED

# 1. Introduction

Gitlab in his [free online plan](#) offers some nice features :

- 2,000 CI pipeline minutes per group per month on our shared runners
- Unlimited private projects and collaborators
  - Built-in CI/CD
  - Cycle Analytics
  - Issue Boards
  - Time tracking
  - Preview your changes with Review Apps
  - Publish static websites for free with GitLab Pages
  - Git LFS 2.0 support

# 2. Server configuration

TODO

# 3. Project creation

- Create a project in web interface.
  - check **Create README.md** or else **master** branch is not created
- Import git project in Eclipse
- Change git config, adding :

```
[user]
name = yourname
email = youraccount@yourprovider.com
```

## 3.1. Configure rebase without merge commit

- In the web interface, go to **Project** → **Settings** → **General** → **Merge request**, and configure as follow :
  - ☒ Fast-forward merge
  - ☒ Only allow merge requests to be merged if the pipeline succeeds
  - ☐ Only allow merge requests to be merged if all discussions are resolved

## 3.2. Protect master branch

Gitlab workflow is not as straightforward as Gerrit's (see below). In Eclipse, it's too easy to push to master instead of our current Merge Request's branch.

Here is how to protect it :

- In Gitlab interface, navigate to your project → **Settings** → **Repository** → expand **Protected Branches** and configure :
  - Branch = **master**
  - Allowed to merge = **Maintainers**
  - Allowed to push = **No one**

When I commit on the wrong project

### 3.3. Configure Eclipse

Clone the repository as you would do for any Git repository, see [Eclipse Best Practices](#) for details.

*EVERY MORNING GOOD  
CODERS UPDATE THEIR  
WORKSPACE*

### 3.4. Merge Requests workflow

We assume that we will be the only one to push on that branch, so we do not check-out the branch, and just push there. This helps do fewer interactions in Eclipse.

### *Initialize the change*

- In Gitlab
  - Go to **Issues** → **New issue**
  - Set information and create
  - Click **Create merge request**
- In Eclipse
  - right click on your repo → **Pull**
    - The branch should appear under **Branches** → **Remote Tracking**
  - In **Remotes** → **origin**, right click on the second address and choose **Configure Push...**
  - Click **Add...**

Remote branch = <type the number to get the full branch>

☒ Force update

The specification should be something like

```
+HEAD:refs/heads/4-minor-asciidoc-changes
```

Press **OK** then **Save**

Eclipse should now be ready to handle smoothly Gitlab workflow. You can check your repository git config which should be like :

### *git/config*

```
[core]
  repositoryformatversion = 0
  filemode = false
  logallrefupdates = true
[remote "origin"]
  url = https://gitlab.com/bcouetil/academy.git
  fetch = +refs/heads/*:refs/remotes/origin/*
  push = +HEAD:refs/heads/4-minor-asciidoc-changes
[branch "master"]
  remote = origin
  merge = refs/heads/master
  rebase = true
[user]
  name = myname
  email = myaccount@myprovider.com
```

### *dev iterations*

- The first time
  - Update your files...
  - Go to **Git Staging** view
  - Stage your files
  - Hit **Commit and Push...** and **Close**
- On each new iteration do the same and

☒ toggle ON **Amend**

change the text if needed

Don't toggle on **Add Change-Id**, this changes the behavior of **Commit and Push...** towards Gerrit style.

More details and screenshots in [Eclipse Best Practices](#)

Now a pipeline should be launched in Gitlab interface.

### *Merge in Gitlab*

Browse the Merge Request in Gitlab

☒ Remove source branch

Pull in Eclipse to be up to date

## 3.5. Pipeline creation

### *Pipeline*

```
image: maven:latest

stages:
  - build
  - test
  - deploy

variables:
  #MAVEN_CLI_OPTS: "-s cg-settings.xml --batch-mode"
  MAVEN_CLI_OPTS: "--batch-mode"
  MAVEN_OPTS: "-Dmaven.repo.local=m2/repository"

cache:
```

```

paths:
  - .m2/repository/

build:
  stage: build
  script:
    - apt-get update -qq && apt-get install -qq --assume-yes libc6-i386
    - mvn clean dependency:purge-local-repository
    - mvn install -DskipTests -Dassembly.skipAssembly=true -Dadoc.skip=true

# the pipeline step must be named 'pages' for gitlab to deploy locally (in addition to github)
pages:
  stage: build
  script:
    #- ./src/scripts/asciidocOnlyModified.sh
    - ./src/scripts/asciidocHistory.sh .
    - apt-get update -qq && apt-get install -qq --assume-yes graphviz
    - git config --global user.email "gitlab@noreply.com"
    - git config --global user.name "GitLab"
    - mkdir public
    #SAMPLE
    - mvn -f cg-asciidoctor-sample/pom.xml
    - mv --verbose cg-asciidoctor-sample/src/docs/asciidoc/*.adoc cg-asciidoctor-sample/target/generated-docs/
    - mv --verbose cg-asciidoctor-sample/target/generated-docs public/sample
    #ACADEMY
    - mvn generate-resources --non-recursive
    - mv --verbose src/docs/asciidoc/*.adoc target/generated-docs/
    - mv --verbose src/docs/asciidoc/subdocs target/generated-docs/subdocs
    - mvn scm-publish:publish-scm
    - mv target/generated-docs/* public/
  artifacts:
    paths:
      # nothing else than public folder will work :(
      - public
  #only:
  # - master

unit-test:
  stage: test
  script:
    - mvn clean
    - mvn test -Dcheckstyle.skip=true -Dadoc.skip=true -pl cg-utils

integration-test:
  stage: test
  script:
    - mvn clean
    - mvn verify failsafe:verify -Dcg.ut.skip=true -Dcheckstyle.skip=true -Dadoc.skip=true -pl cg-utils

assembly:
  stage: deploy
  script:
    - mvn clean
    - mvn install -DskipTests -Dcheckstyle.skip=true -Dadoc.skip=true -pl cg-utils
  #only:
  # - master

```

## 4. Troobleshooting

### 4.1. I accidentally

## 5. Appendix

### 5.1. Revision marks
