Table 1. History

Date	Author	Detail
2018-08-24	bcouetil	Icones added for download + favicon added for webpage
2018-08-23	bcouetil	Initial commit

1. Introduction

Gitlab in his free online plan offers some nice features:

- 2,000 CI pipeline minutes per group per month on our shared runners
- Unlimited private projects and collaborators
 - Built-in CI/CD
 - Cycle Analytics
 - Issue Boards
 - Time tracking
 - Preview your changes with Review Apps
 - Publish static websites for free with GitLab Pages
 - Git LFS 2.0 support

2. Server configuration

TODO

3. Project creation

- Create a project in web interface.
 - check Create README.md or else master branch is not created
- Import git project in Eclipse
- Change git config, adding :

```
[user]
name = yourname
email = youraccount@yourprovider.com
```

3.1. rebase without merge commit

- In the web interface, go to **Project** → **Settings** → **General** → **Merge request**, and configure as follow:
 - ☑ Fast-forward merge
 - ☑ Only allow merge requests to be merged if the pipeline succeeds
 - □ Only allow merge requests to be merged if all discussions are resolved

3.2. Merge Requests workflow

We assume that we will be the only one to push on that branch, so we do not check-out the branch, and just push there. This helps do fewer interactions in Eclipse.

Initialize the change

•	Go to Issues → New issue
•	Set information and create
•	Click Create merge request
•	In Eclipse, right click on your repo → Pull
	 The branch should appear under Branches → Remote Tracking
•	Update the files
•	Commit
•	Right click on local/master → Push Branch
	· Toggle
	□ Configure Pull
	□ Force
	∘ Next → Finish
	On each new dev iteration
•	Commit with amend, ignore the warning
•	Right click on local/master → Push Branch
•	Toggle
	□ Configure Pull
	☞ Force
•	Next → Finish
	Merge in Gitlab
	Browse the Merge Request in Gitlab
Y	Remove source branch
	Remove the Remote branch in your git repo → Branches → Remote Tracking
	Right click on your repo → Pull
	 If you get an error, you have obviously configure Pull for the dead branch, so use Pull. instead and select master branch

3.3. Pipeline creation

Pipeline content

```
image: maven:latest
stages:
  - build
  - test

    deploy

variables:
  #MAVEN_CLI_OPTS: "-s cg-settings.xml --batch-mode"
  MAVEN_CLI_OPTS: "--batch-mode"
  MAVEN_OPTS: "-Dmaven.repo.local=.m2/repository"
cache:
  paths:
   - .m2/repository/
build:
  stage: build
  script:
   - apt-get update -qq && apt-get install -qq --assume-yes libc6-i386
   - mvn clean dependency:purge-local-repository
   - mvn install -DskipTests -Dassembly.skipAssembly=true
# the pipeline step must be named 'pages' for gitlab to deploy locally (in addition to github)
pages:
  stage: build
  script:
   #- ./src/scripts/asciidocOnlyModified.sh
   - ./src/scripts/asciidocHistory.sh .
   - apt-get update -qq && apt-get install -qq --assume-yes graphviz
   - git config --global user.email "gitlab@noreply.com"
   - git config --global user.name "GitLab"
   - mvn generate-resources -Dadoc.skip=false --non-recursive
   - cp src/docs/asciidoc/*.adoc target/generated-docs/
   - cp -R src/docs/asciidoc/subdocs target/generated-docs/
   - mvn scm-publish:publish-scm
   - mkdir public
    - mv target/generated-docs/* public/
  artifacts:
    paths:
      - public
  #only:
  # - master
unit-test:
  stage: test
  script:
    - mvn clean
   - mvn test -Dcheckstyle.skip=true -pl cg-utils
integration-test:
  stage: test
  script:
    - mvn clean
   - mvn verify failsafe:verify -Dcg.ut.skip=true -Dcheckstyle.skip=true -pl cg-utils
assembly:
  stage: deploy
  script:
   - mvn clean
   - mvn install -DskipTests -Dcheckstyle.skip=true -pl cg-utils
  #only:
  # - master
```

4. Appendix

4.1. Revision marks
