1. Server configuration

1.1. Quality Gates

Click on **Quality Gate**

Create a new one for your project and select your quality gate rules:

- Comments is less than 30 then 25
- Coverage is less than 86 then 80
- Maintainability Raiting is worse than A then C
- Reliability Raiting is worse than A then C
- Security Raiting is worse than A then C
- Unit Test Success (%) is worse than A then C

1.2. Update

This has to be done only for a new Production Line

Administration → System → Update Center

• SonarJava: install or update to latest

• Findbugs : install

• SoftVis3D: install

1.3. Rules / quality profile

1.3.1. Export

- Navigate to **Quality Profiles** → **BCT** (or your profile) → **Actions** → **Back Up**
- · This will download a XML
- On CG-WM, the common java XML quality profile is saved here:

src\docs\SonarQube.qualityProfile.BCT.xml

1.3.2. Import

for an import to be successful, SonarQube must know the rules, so SonarJava and Findbugs must be up to date

• Navigate to **Quality Profiles** → dropdown menu next to **Create** → **Restore Profile**

• Provide the saved XML

1.3.3. Create

This has to be done only if you want to define a custom set of rules

- Choose Quality Profiles → Java → Sonar way → Copy
- Select the newly created profile
- Now you can:
 - Click on the number of active rules to deactivate some
 - Click on **Activate More**
 - Go to Rules, search one and change its value

1.4. Technical Debt

This has to be done only for a new Production Line

- Select Administration → Configuration → General Settings → Technical Debt
- Set Maintainability rating grid = 0.01,0.02,0.03,0.05
 - This means that a tech debt < 1% is rated A, a tech debt > 5% is rated E.
- · Hit save technical debt

2. Appendix

2.1. Revision marks
