Jenkins Configuration Details

Version 1.18-SNAPSHOT

2018-08-26

Table of Contents

Table 1. History

Date	Author	Detail
2018-08-26	bcouetil	Asciidoc minor changes
2018-08-23	bcouetil	Initial commit

1. Server configuration

Connect to Jenkins homepage.

1.1. Plugins installation

> **ℹ**   This has to be done only for a new Production Line

- Go to **Jenkins** → **Administration Jenkins** → **Gestion des plugins**
- Update all plugins which have an update available
- Select **Disponibles** (=available) and install :
  - Pipeline Maven Integration
  - Throttle Concurrent Builds Plug-in
    - To be able to force non concurrent builds
  - Xvnc
    - To have a virtual screen if needed in tests
  - Naginator
    - For retry on failure
  - Gerrit Trigger
    - To launch job on gerrit update
  - HTML Publisher plugin
    - To have the **Maven Reporting** link when "maven site" is launched
  - Monitoring
    - To see nice health data of Jenkins on https://bpmfactory.s2-eu.nvx.com/jenkins/monitoring
  - JUnit Attachments
    - for enhanced job reporting
  - Logstash
    - To send jenkins jobs output to logstash then elastic
  - diskcheck
    - Check filesystem space on slave before a build
  - disk-usage
    - Show disk usage per build, configuration in **Administrer Jenkins** → **[Configurer le système]** → **Utilisation du disque**
  - AnsiColor
    - To allow colors in build logs
  - Simple Theme Plugin

▪ to change Jenkins basic theme

1.2. Change Theme

ℹ This has to be done only for a new Production Line

- Have the Simple Theme Plugin installed
- Navigate **Administrer Jenkins** → **[Configurer le système]** → **Theme** section
  - URL of theme CSS = https://cdn.rawgit.com/afonsof/jenkins-material-theme/gh-pages/dist/material-cyan.css
    - ▪ see the author's page for other colors : http://afonsof.com/jenkins-material-theme/
  - Save

1.3. Gerrit Trigger Configuration

ℹ This has to be done only for a new Production Line

On Jenkins :

- Create the console-master job if not already existing

  Create a new freestyle job.

  Name it console-master

  General

  ☑ **[Restreindre où le projet peut être exécuté]**

  - ▪ master

  Put this **Build** → **[Ajouter une étape au build]** → **[Exécuter un script shell]** → paste this and save :

  ```
  ssh-keygen -y -f /root/.ssh/id_rsa > /root/.ssh/id_rsa.pub
  ls -lart /root/.ssh/
  more /root/.ssh/id_rsa.pub
  ```

- Add 1 executor on the master node
  - **Home** → **[État du lanceur de compilations]** → **[maître]** → **Configurer**
- Execute the console-master
- Keep track of what the execution gave for later Gerrit configuration, example :

  ```
  ssh-rsa
  AAAAB3NzaC1yc2EAAAADAQABAAABAQDKGER5oLwkNhcCYtTzmUQooA+1mdrjIGi84AVsOHyNpsMqFBhkpxfImvopvKlYiztXUA15dwwDsPWq1tUcy/4N
  WqKnMTQA57xxxT2r8suF/DVlH6fNn8T73mGz9+kT77FXHuaMfmDTqrwPngUYQMm2Y9kTjGhIcH/jseq6jCUawITAOs/6EUbs7jtJ/S+jMb6Ed60S7S/n
  R3IzQwVrXMiQjDdFsL8RWEBQ54T4cNia/HMI8MK7mEEF5K008g4Ru3Bidk+VSisPUYFPmNc/tE12RyAjvkcwWxrYqFEB5h6RlS0yWXAjCUzjv8T0ov4W
  us+ZqNgqUMYtBBf+zQvQC1ub
  ```

- When finished, remove the executor from master node
- Create a local trigger server
  - **Home → Administrer Jenkins → Gerrit Trigger → Add New Server**
    - Gerrit Connection Setting
      - Name = local_server
      - Hostname = gerrit
      - Frontend URL = http://gerrit/
      - SSH Port = 29418
      - Username = svc-fr-bpmfact
      - SSH Keyfile = /root/.ssh/id_rsa
    - Gerrit Reporting Values
      - Verify = <vide>, 1, -1, -1, -1
      - Code Review = <vide>, 1, -1, -1, -1
    - Gerrit Verified Commandes
      - Started = vide
      - Successful =

        ```
        gerrit review <CHANGE>,<PATCHSET> --message 'Build Successful (     ) <BUILDS_STATS>' --verified
        <VERIFIED>
        ```

      - Failed =

        ```
        gerrit review <CHANGE>,<PATCHSET> --message 'Build Failed (  _  ) <BUILDS_STATS>' --verified
        <VERIFIED>
        ```

      - Unstable =

        ```
        gerrit review <CHANGE>,<PATCHSET> --message 'Build Unstable (   °      °)  <BUILDS_STATS>' --verified
        <VERIFIED>
        ```

      - Not Built =

        ```
        gerrit review <CHANGE>,<PATCHSET> --message 'No Builds Executed (     ,)  <BUILDS_STATS>' --verified
        <VERIFIED>
        ```

    - Save

On Gerrit :

- Connect with the technical user (svc-fr-bpmfact / Bpm-fact0ry)
  - You may have to use a secondary browser, since authentication is very persistent on Gerrit
- Click on the user top right → **Settings → SSH Public Keys → [Add Key…]**

- Add the public key content from Jenkins server (the one asked to be kept track earlier), starting with **ssh-rsa**

On Jenkins :

- Test the earlier configured connection of the trigger with **Test Connection** while editing local_server

- Restart jenkins with : https://bpmfactory.s2-eu.nvx.com/jenkins/safeRestart

- The Gerrit trigger should be up and running

1.4. Administration

This has to be done only for a new Production Line

1.4.1. Overall configuration

Connect to Jenkins configuration page : https://bpmfactory.s2-eu.nvx.com/jenkins/configure

Propriétés globales

- JAVA_HOME = /usr/

Jenkins Location

- Adresse email de l'administrateur système = xxxxx@nvx.com

Extended E-mail Notification

- SMTP server = smtp.nvx.fr

- Default user E-mail suffix = @nvx.com

Notification par email

- Serveur SMTP = smtp.nvx.fr

- Suffixe par défaut des emails des utilisateurs = @nvx.com

Save.

1.4.2. Tools configuration

Connect to Jenkins tools configuration page : https://bpmfactory.s2-eu.nvx.com/jenkins/configureTools/

Maven

- Nom = Maven 3.5

- Version = 3.5.2

Logstash Plugin

- Indexer type = ELASTICSEARCH

- Host name = http://frpardge.corp.nvx.com

- Port = 9200
- Key = /jenkins/builds

Save.

1.5. Allow CSS on published HTML

ℹ️ This has to be done only for a new Production Line

- Create a pipeline "css-support"
- Build Triggers
  - Construire périodiquement
    - Planning = 0 10,15,20 * * *
- Pipeline

```
println(System.getProperty("hudson.model.DirectoryBrowserSupport.CSP"))
System.setProperty("hudson.model.DirectoryBrowserSupport.CSP", "")
println(System.getProperty("hudson.model.DirectoryBrowserSupport.CSP"))
```

  - Uncheck **Use Groovy Sandbox** and save

1.6. SonarQube token

To be able to upload quality results to SonarQube, you have to create a token.

Go to SonarQube application on the PL → **YourName** → **My Account** → **Security** → Name = Jenkins → **Generate**

Now maven can upload results to SonarQube with something like :

```
mvn sonar:sonar -Dsonar.login=ab7451586619e21d0e2bb50389899ce3595e3 -Dsonar.host.url=http://sonarqube:9000/sonarqube
```

1.7. ssh key on remote server

ℹ️ This has to be done only for a new remote server

If you have a remote server where you deploy your artifacts for further developments or tests : * note the result of the slavePrep.sh script under **Here is this server's ssh public key**. Here is an example

```
ssh-rsa
AAAAB3NzaC1yc2EAAAADAQABAAABAQDZRLfTsI+cTRjbhYhnDvIOI3lsexMiJpwcBmeuJrISnEdh1LRPlviQjtI1h7NCihejVIPgvzyMVn3tMLsvABBXLTbV
FIetOudpJn+8isnYAWWaaqX2fce/BqjLC26ygR4n25sqTO/GE9AhV5uBPbYTr4HCrH9Wzd8nU13DXm8COhxUKh1+Uwm47KB11fVH/boIUygocIRu1FXS9TJy
MU0qFf3GGmDXs56VTe4ZQtPBHJ1klRXQQc6UIhTbdLpedo4Khvzr7TpdVZg13qXZt35/t7Gu4lbImHSlN64TKhaxAYgCPjYKgl9tAWJpEkk3WzXghohLivIQ
PInu5h3uvckH jenkins@b43496a2520e
```

- Connect on the remote server via SSH
- add the key to ~/**.ssh**/**authorized_keys** file

1.8. Pipelines creations

1.8.1. The Review pipeline

This will be the review pipeline with steps from checkout to quality check. This pipeline is a "pipeline as code".

Go to Jenkins home page :

https://bpmfactory.s2-eu.nvx.com/jenkins

- Click **New Item**
- Choose a name : CG-WM_P1_Review
- Choose Pipeline type

General

- Description = This is the review pipeline fired by Gerrit on non yet validated push
- Check **Supprimer les anciens builds**
  - Strategy = Log Rotation
  - Nombre de builds à conserver = 10

Build Triggers

⚠️ In the field **Choose a Server**, **Any Server** won't work

- Choose **Gerrit event**

Gerrit Trigger

- Choose a Server = local_server
- Trigger on = Patchset Created
- Gerrit Project
  - Type = Plain
  - Pattern = cg-wm
  - Branches
    - Type = Plain
    - Pattern = master

Advanced Project Options

None.

Pipeline

- Definition = Pipeline script

Pipeline content to copy/paste

```groovy
#!groovy

properties([
  buildDiscarder(logRotator(artifactDaysToKeepStr: '', artifactNumToKeepStr: '', daysToKeepStr: '', numToKeepStr: '7')),
  [$class: 'ThrottleJobProperty',

        ])
    currentBuild.result = 'FAILURE'
    }
}//timeout
logstashSend failBuild: false, maxLines: 1000
}//node

@NonCPS
def version(text) {
    def matcher = text =~ '<version>(.+)</version>'
    matcher ? matcher[0][1] : null
}
```

1.8.2. The Deploy pipeline

This will be the main pipeline with everything from checkout to deployment. This pipeline is a "pipeline as code".

Go to Jenkins home page :

- Click **New Item**
- Choose a name : CG-WM_P2_Deploy
- Choose **Pipeline** type

General

- Check **Supprimer les anciens builds**
  - Strategy = Log Rotation
  - Nombre de builds à conserver = 10

Build Triggers

- Choose « Scrutation de l'outil de gestion de version »
- Planning = H * * * *

Advanced Project Options

None.

Pipeline

Definition = Pipeline script from SCM

SCM = Git

- Repositories
  - Repository URL = http://bpmfactory.s2-eu.nvx.com/gerrit/p/cg-wm.git
  - Credentials = svc-fr-bpmfact / Bpm-fact0ry
- Branches to build : */master

Script Path = Jenkinsfile-2-deploy-to-dev

☑ Lightweight checkout

Pipeline content (for information)

```groovy
#!groovy
node {
  timeout(60) {
    try {
      stage('Checkout') {
        cleanWs()   // requires workspace cleanup plugin to be installed
        retry(3) {
          checkout scm
        }
        def v = version(readFile('pom.xml'))
        echo "Building version ${v}"
      }
      stage('Compilation') {
        //slaves are wiped out randomly, so we prepare them on each execution
        sh '$WORKSPACE/src/scripts/slavePrep.sh'
        withMaven(maven: 'Maven 3.5', mavenOpts: '-Xmx1024M', options: [artifactsPublisher(disabled: true)]) {
          //used to deploy libs to local maven repository
```

```groovy
        sh "mvn clean"
        //The assembly is postponed : it needs some further generated PDF
        sh "mvn install -DskipTests -Dassembly.skipAssembly=true"
      }
    }
    stage('Unit Tests') {
      wrap([$class: 'Xvnc', takeScreenshot: false, useXauthority: true]) {

```

1.8.3. The Deploy Int pipeline

⚠️   Describe this pipeline when stable

1.8.4. The Release pipeline

This is the release pipeline launched manually at will when an external release is needed. This pipeline is a "pipeline as code".

Go to Jenkins home page :

https://bpmfactory.s2-eu.nvx.com/jenkins

- Click **New Item**

- Choose a name : CG-WM_P3_Release
- Choose **Pipeline** type

General

- Check **Ce build a des paramètres**
  - Paramètre texte
    - RELEASE_VERSION
    - the release version, with pattern 1.YY.MM[.increment] (ex : 1.17.5.9)
- Check **Supprimer les anciens builds**
  - Strategy = Log Rotation
  - Nombre de builds à conserver = 10

Build Triggers

No trigger (manual launch).

Advanced Project Options

None.

Pipeline

Definition = Pipeline script from SCM

SCM = Git

- Repositories
  - Repository URL = http://bpmfactory.s2-eu.nvx.com/gerrit/p/cg-wm.git
  - Credentials = svc-fr-bpmfact / Bpm-fact0ry
- Branches to build : */master

Script Path = Jenkinsfile-4-release

☑ Lightweight checkout

Pipeline content (for information)

```groovy
#!groovy

//Release is a manual firing (and should always be)
//No need to do the whole process, trunk is always trustworthy with our setup
//Just check that the merge pipeline (DeployToDev) is successful

node {
  timeout(30) {
    try {
      stage('Checkout') {
        cleanWs()   // requires workspace cleanup plugin to be installed
        retry(3) {
          checkout scm
        }
        echo "Releasing version $RELEASE_VERSION"
```

```groovy
        }
        stage('Documentation') {
          //get history from git to asciidoc documentation
          sh '$WORKSPACE/src/scripts/asciidocHistory.sh $WORKSPACE'

          withMaven(maven: 'Maven 3.5', mavenOpts: '-Xmx1024M', options: [artifactsPublisher(disabled: true)]) {
            //to put jars in local maven repository if needed
            sh "mvn clean"
            sh "mvn versions:set -DnewVersion=$RELEASE_VERSION"
            //without this local installation, modules are searched on internet on mvn validate
            sh "mvn install -DskipTests -Dassembly.skipAssembly=true"
            //we launch some (quick) tests that contains the generation of service list for the cg-utils doc
            sh "mvn test -pl cg-utils"
            //time to launch the actual doc generation
            //validate produces the date for PDF
            sh "mvn validate asciidoctor:process-asciidoc antrun:run@pdfsAddVersion javadoc:aggregate
-Dcheckstyle.skip=true"
            sh "mvn javadoc:jar -pl cg-utils -Dcheckstyle.skip=true"
          }

          step([$class: 'JavadocArchiver', javadocDir: 'target/site/javadoc', keepAll: true])
          archiveArtifacts artifacts: '**/*.pdf,**/*-javadoc.jar', excludes: '**/test*.pdf'
        }
        stage('Deployment') {
          //Deployment is after documentation because a pdf must be in the zip

          //Delete tag if this is a replayed-on-error build...

          //...locally
          sh "git tag -d cg-wm-$RELEASE_VERSION || true"

          //...remotely
          //Special characters have to be URL encoded : https://stackoverflow.com/questions/6172719/escape-character-in-
git-proxy-password
          sh "git push --force --delete https://svc-fr-cric:ptTpilL5FS47RHDFV8541owV4zkbZOtVrxyqRsmGhw@cric.pl.s2-
eu.nvx.com/gerrit/p/cg-wm.git cg-wm-$RELEASE_VERSION || true"

```
    def matcher = text =~ '<version>(.+)</version>'
    matcher ? matcher[0][1] : null
}
```

1.9. Troobleshooting

1.9.1. Disk space usage > 90 %

If the disk space usage is too high and your build fails a the start for this reason, you can purge some folders with the below actions.

- Edit the **console** job.

- Put these lines and save :

```
du --max-depth=1 /home/jenkins/workspace/ | sort -n -r | head -n 30
find /home/jenkins/workspace/ -maxdepth 1 -mtime +90 -type d -depth -print
```

- Launch the job

- Following the results, do the necessary deletions

- If there are some ws-cleanup directory, you can delete them safely :

```
rm -rf /home/jenkins/workspace/\*ws-cleanup*/ ???
```
